DETAILED ACTION

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 5/8/07 has been entered.

Claim Rejections - 35 USC § 103

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claims 1-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Gill et al. (6113637) in view of McGahan et al. (WO 01/62191). Gill et al. disclose (Fig. 1a) a spinal implant with two baseplates (22,24) that articulate. Gill also shows (Figs. 14a,15a) a manipulation tool to deliver the implant to the spinal space with the distal end including a wedge-shaped extension 84. It can be seen (Figs. 11,12) that the baseplates include recessed corners (40,62). Fig. 17 shows the manipulation tool engages the recessed corners. However, Gill et al. fail to disclose the corresponding implant surfaces and tool engaging surfaces as being angled. It is noted in Fig. 14b that Gill shows the corresponding surfaces match. McGahan et al. illustrates (Fig. 15b) a spinal orthopedic set with a spinal implant

Art Unit: 3738

10 with angled perimeter surfaces having a central flat surface 22 flanked by two flat corner perimeter surfaces 18, 26 that correspond to the angled distal end of the tool having central surface 128 and two flanked flat surfaces 126, 130 to engage the implant. McGahan teaches that angled perimeter flat surfaces are provided to prevent rotation of the implant when inserting with the tool, page 12, lines 21-24. McGahan shows (Figs. 10,13,20a,21a,26) a wedge-shaped extension projection from the distal end of the manipulation tool. Regarding claims 9,10,17,18 please note the intended use as set forth in the claims carries no weight in the absence of any distinguishing structure. It would have been obvious to one of ordinary skill in the art to modify the corresponding surfaces of the baseplates and tool to be angled as taught by McGahan et al. with the Gill implant system such that it prevents any sliding motion that may occur so the baseplate will not slip or move off the tool when inserting.

Response to Arguments

Applicant's arguments with respect to claims 1-20 have been considered but are most in view of the new ground(s) of rejection.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Brian E. Pellegrino whose telephone number is 571-272-4756. The examiner can normally be reached on Monday-Friday from 8:30am to 5pm. The examiner can also be reached on alternate Fridays.
